# PALLY
OPERATOR PANEL

The Pally Operator Panel (POP) is a user-friendly interactive interface, specifically designed for operators. It is easy to use and shows current pallet data as well as allowing simple operational actions. The Pally Operator Panel is one of a kind, a simple overlay to the Pally URCAP that gives your operators the choices they need to do daily operations in the best and most efficient manner.

Available in 12 languages.

✁ BENEFITS

✓ One-click-activation, no installation required

✓ Easily activate left and right pallets (without the need for physical buttons)

✓ Get real-time palletizing data on your teach pendant

✓ Available in your operators native language

✓ You can easily choose and change the pattern you want to palletize

LANGUAGES AVAILABLE

✁ AVAILABILITY

The Pally Operator Panel is integrated with the Pally URCap, but licensed independently. The Service Package can be bought for different time lengths. For more information, see the Service Package/Price List flyer, contact your integrator or reach out to us.

To get access to POP, your license needs to have Service Package included.
